

Digital Asset Fund Class B

Fund for qualified, professional and semi-professional investors

The Teroxx AIF Digital Asset Fund is a PE-Fund with investment in a company that actively trades digital assets by means of a professional portfolio management. The special feature of the strategy is the selection with regard to their market capitalization, the trading volume and their underlying projects. Thus, only reputable coins with an economic background and representative stable digital currencies are admitted to the portfolio.

The investment strategy focuses on exploiting the two most important characteristics of liquid markets: the trend momentum effect and mean reversion effect. Long and short trades are executed. In order to take advantage of the behaviour of the markets, emphasis is placed on maximizing each trade. A tight initial stop is maintained for each entry. The rule-based investment process thus ensures a structured selection of digital target assets and is backed by a risk control system. This leads to a return profile in which many trades balance each other out and individual trade series with a regular sequence lead to the desired larger winners. This results in a very good statistical expected value with moderate drawdowns.

The Teroxx AIF Digital Asset Fund thus offers professional and qualified investors participation in a regulated, rule-based investment with access to active trading in digital assets.
